

SANOJ C SAM

sanojcsam123@gmail.com| +91 8921786185| <https://www.linkedin.com/in/sanoj-c-sam-1631aa158/>

EDUCATION

IGNOU UNIVERSITY

Master of Computer Applications -
JUNE 2025

MG UNIVERSITY

Bachelor of Computer Applications -
2021
PERCENTAGE: 61.11%

SKILLS

DOMAINS

Generative AI, Agentic AI, Machine Learning

PROGRAMMING LANGUAGES

Python

FRAMEWORKS & LIBRARIES

TensorFlow, Scikit-learn, NumPy, Pandas, Matplotlib, seaborn

GENERATIVE AI

Large Language Models (LLMs), RAG, LangChain,

DEVELOPMENT

FastAPI, Flask

DATABASES

MySQL, MongoDB

MLOPS

Git, CI/CD PIPELINE (GitHub Actions)

DEVOPS & MONITORING

Docker, Grafana (monitoring)

SOFT SKILLS

Quick Learner, Time Management, Problem Solving

CERTIFICATIONS

NATIONAL COUNCIL FOR
TECHNOLOGY AND TRAINING
(NACTET). - 2020
Luminar Technolab

LANGUAGES

Malayalam, English

EXPERIENCE

AI DEVELOPER INTERN | ZEC SER LLP

June 2025 – Present

- Helped in building an Automated Recommendation System to provide better suggestions for users, improving their experience.
- Faced issues in cleaning large and messy datasets. solved it using Pandas and NumPy to handle missing and duplicate data.
- Supported the team in feature engineering to select important features that improve model accuracy.

PROJECTS

HYBRID STOCK PRICE PREDICTION MODEL USING LSTM, LINEAR REGRESSION | PROJECT-1

FEB 2025

- Built a model that can predict future stock prices by looking at past stock data.
- Combined LSTM (handling time-series data) with Linear Regression to improve accuracy.
- The model uses an autoregressive method, meaning it predicts future values based on previous values.
- Compared results of both models and combined them to get better predictions.
- Git Repository: <https://github.com/Sanoj12/Hybrid-Machine-Learning-Model-with-Python>

END-TO-END-BUILDING-A-RAG-PIPELINE-PROJECT | PROJECT-2

Jan 2025

- Built a RAG pipeline leveraging Wikipedia as an external knowledge base for retrieval.
- Sentence Transformers for embedding generation
- FAISS for fast and efficient retrieval, Hugging Face's QA pipeline to extract final answers
- Git Repository: <https://github.com/Sanoj12/end-to-end-Building-a-RAG-Pipeline-project>

MEDICAL CHATBOT WITH LANGUAGE TRANSLATION AND GRAFANA MONITORING | PROJECT-3

MAY 2025

- Built a medical chatbot using Streamlit that answers health-related questions and gives AI-based suggestions.
- Added language translation users can ask questions in their native language.
- Used Prometheus metrics to count how many questions were asked and showed this data in Grafana dashboards.
- Used Docker to package the whole app so it can run easily on any system.
- Git Repository: <https://github.com/Sanoj12/end-to-end-medical-chatbot>
